Limited Warranty Basic Info

Minnesota Pergolas provides a one 6 month limited warranty on its pergola kit products covering missing parts, defects in materials and workmanship or damage to the pergola kit sustained prior to delivery to you (the original owner of the installed pergola).

Our pergola kits are constructed using natural wood, rough sawn western red cedar. The lumber is pre-cut and drilled to facilitate assembly, but is not sanded or stained. The wood used in our pergola kits will include varying amounts of natural color shading, grain, knots, minor cracks and minor warping or other non-structural imperfections. We require that our customers thoroughly inspect the contents of their pergola kit at the time it is delivered to ensure that all specified parts have been received and there are no visibly damaged or defective parts. In order to ensure coverage under this warranty, Visible damage or missing parts must be reported within 7 days of receiving the product

This warranty will cover excessive warping or structurally unsound cracking of lumber for up to 6 months from the date you receive your pergola, provided that you have complied with the other provisions of this warranty.

We provide assembly instructions with each of our pergola kits, but we are not responsible for installation or any injuries or damages that occur during or after assembly or installation. The customer is responsible for assembly and installation, should hire competent help if needed, abide by local building codes and obtain permits as may be required by such codes.

We recommend that our customers assemble and install their pergola promptly after receipt, and store the contents of the kit in a garage or shed to prevent exposure to the elements prior to assembly. Assembly of kits after 30 days from delivery will void this warranty and require that we charge for any parts that become warped or otherwise damaged.

We recommend that pergola posts are installed in or on top of concrete footings or an existing concrete slab. Installing wooden posts directly into the ground is not recommended and will reduce the useful life of your pergola.
